

# Expert System Exercise

An expert system is another name for a rule-based system. Here, you need following, regardless of which expert system you make:

1. Data Entry / Input (Information level)
2. Create a knowledge base (which you may call 'database' if you so wish) [knowledge level]
2. A set of rules. [Intelligence level]

Develop an expert system for loan advising according to the following scheme:

**Focus on control event handlers in this exercise.**
